Mercer RPM, Inc. is now your EXCLUSIVE Bonitron representative in the state of Wisconsin! We are proud to partner with this great company to bring you the absolute best. Contact your area representative today to learn more about this great partnership and to see what we can do to help your business succeed! We are thrilled to be able to represent Bonitron in Illinois, Indiana, Kentucky, Michigan, Ohio and now Wisconsin.

### New Product Announcement From Reuland

Mercer RPM, Inc. is excited to announce the arrival of the new line of Super Series 100 Inverter Duty/Vector Duty motors from Reuland, also known as the SS-100 Series. These hand built motors provide extraordinary quality and performance, while being competitively priced and offering various features to compete with the high volume manufacturers in the industry. Each SS-100 Series motor is backed with a 3-year warrant from Reuland. With a brand built on quality and knowledge, Mercer RPM is excited to offer this new line of products to our customers across all our territories

### Now Offering Webinars For All Customers

In these trying times of the pandemic forcing limited travel and face-to-face interactions, our staff has developed several webinar based presentations. These webinars cover a wide range of topics, some of the more recent webinars our team members have hosted focused on various offerings like motors, encoders, brakes, and other automation products from any of our principals.

These presentations usually run about 45 minutes long, and can be hosted via Zoom for as many people as you would like to attend. Please contact your local sales representative today to set up a presentation for your team

## Application Highlight

### New Project with Hyundai & City of Chicago

The Central Park Ave Pump Station, a pump station for the City of Chicago Department of Water Management (DWM) was built in the 1930's. The five main pumps at the station have been driven by steam turbines for 80+ years.

The DWM decided to 'electrify' the pump station by replacing the steam turbines with Electric Motors. Through the bidding process, Hyundai Electric (represented by Mercer RPM) was selected as the motor supplier. The project requires a total of (5) 4160V motors - (3) 3250HP and (2) 2000HP.

The first motor, a 325HP motor, was installed by Aldridge Electric (with Hyundai's supervision) in the pump room back in August. However, due to the weight of the motor and the limited capacity of the on-site crane, the motor had to be disassembled to be moved into the pump station, and then re-assembled on the pump room floor.

The remaining motors will be installed in 2021 and 2022. Be sure to stay tuned for future updates on this modernization project with Hyundai Electric and the City of Chicago!
